APPLICATION FOR MACHINE LEARNING INTERNSHIP

Dear Sir or Madam,

Currently a student at 42 School Paris and passionate about artificial intelligence. I am eager to apply my skills to your company through an internship in machine learning.

42 School offers a unique peer-to-peer coding education method that operates without traditional lectures or professors. This approach, which emphasizes collaboration and self-reliance, has equipped me with the skills to tackle complex problems and develop adaptability and innovation—qualities that are crucial in the professional world.

Your expertise in machine learning and the innovative projects your company leads represent a valuable opportunity for me to deepen my knowledge while contributing to your efforts. Through my education and experiences, I have built a solid foundation in programming, particularly in Python, which is essential in the field of data science.

I am confident that this experience will be beneficial for handling practical challenges during my internship. With a logical mindset and keen curiosity, I continuously follow the latest developments in artificial intelligence. Participating in hackathons and coding challenges has taught me to work both independently and as part of a team in a dynamic environment.

My involvement in sports and volunteer work has also honed my commitment and perseverance.

I am excited about the possibility of joining your team and contributing to significant projects. I believe my background will capture your interest. I am available to discuss my application in further detail during an interview or to answer any questions you might have about me or my resume.

I look forward to your response and thank you in advance for your consideration.

Yours faithfully,

Made at Les Lilas
